CERTIFIED SUPPLY CHAIN PROFESSIONAL

MODULE 1: SUPPLY CHAINS, DEMAND MANAGEMENT, AND FORECASTING

SECTION A:
INTRODUCTION TO SUPPLY CHAINS

APICS

ascm

Section A Introduction

| **Section A Key Processes:**	**Section A Topics:**

Section A Key Processes:

- Design the supply chain network.
  - Flow of product, information, and funds

Section A Topics:

- Topic 1: Supply Chain Models
- Topic 2: Supply Chain Maturity and Complexity

APICS

Basic Supply Chain for a Product

## Funds Flows, Value, and Balance

Funds Flows

- Goes upstream: customer > producer > supplier.
- Not linear.
- E-payments reduce cash-to-cash cycle time.
- Better customer-supplier relationships
- Fewer imbalances between larger and smaller players.

Value and Balance

Creating net value in SC

Value-creating activities for all stakeholders

Balancing competing interests
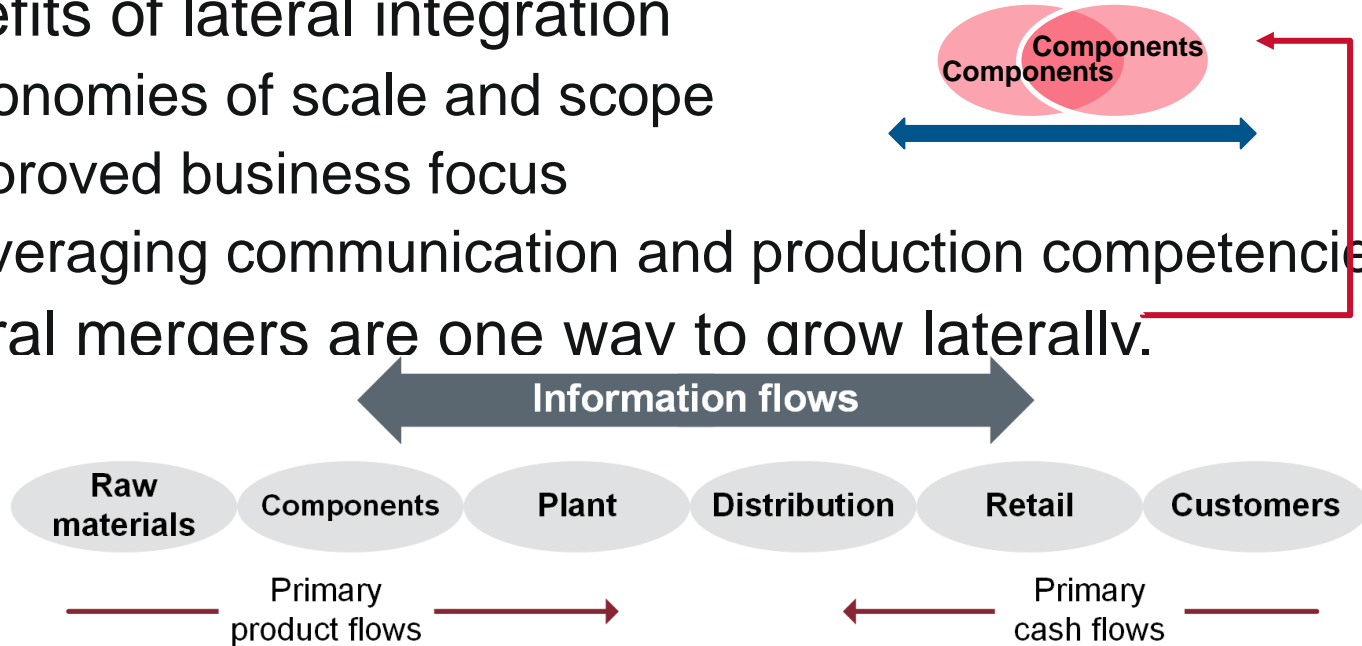

APICS

Vertical Integration

- Benefits of vertical integration
  - No dealing with competitors for supplies, etc.
  - Enhanced visibility into operations
  - Same ownership and management for all activities in supply chain
- Ford: historic example
- McDonald's doesn't directly own its supply chain, but:
  - Long-term supply contracts
  - Vested interest model
  - 100% landowner of all sites
  - Significant control

# Lateral (Horizontal) Integration

- Benefits of lateral integration
  - Economies of scale and scope
  - Improved business focus
  - Leveraging communication and production competencies
- Lateral mergers are one way to grow laterally.

Components
Components

Information flows

Primary cash flows

Supply Chain Stages

Reactive	*Reactive Efficient*	*Proactive Efficient*	*Strategic Driver*	*Consistent Systematic*
Stage 1: **Multiple dysfunction**	**Stage 2:** **Semi-functional enterprise**	**Stage 3:** **Integrated enterprise**	**Stage 4:** **Extended enterprise**	**Stage 5:** **Orchestrated supply chain**

Stage 1: Multiple Dysfunction

Stage 2: Semifunctional Enterprise

Stage 3: Integrated Enterprise

Stage 4: Extended Enterprise

Stage 5: Orchestrated Supply Chain

Data-driven ◆ Team-driven

Resiliently sourced ◆ Inclusively designed ◆ Change-ready

Gaps addressed for end-to-end visibility and process automation

Manufacturing Supply Chain Model
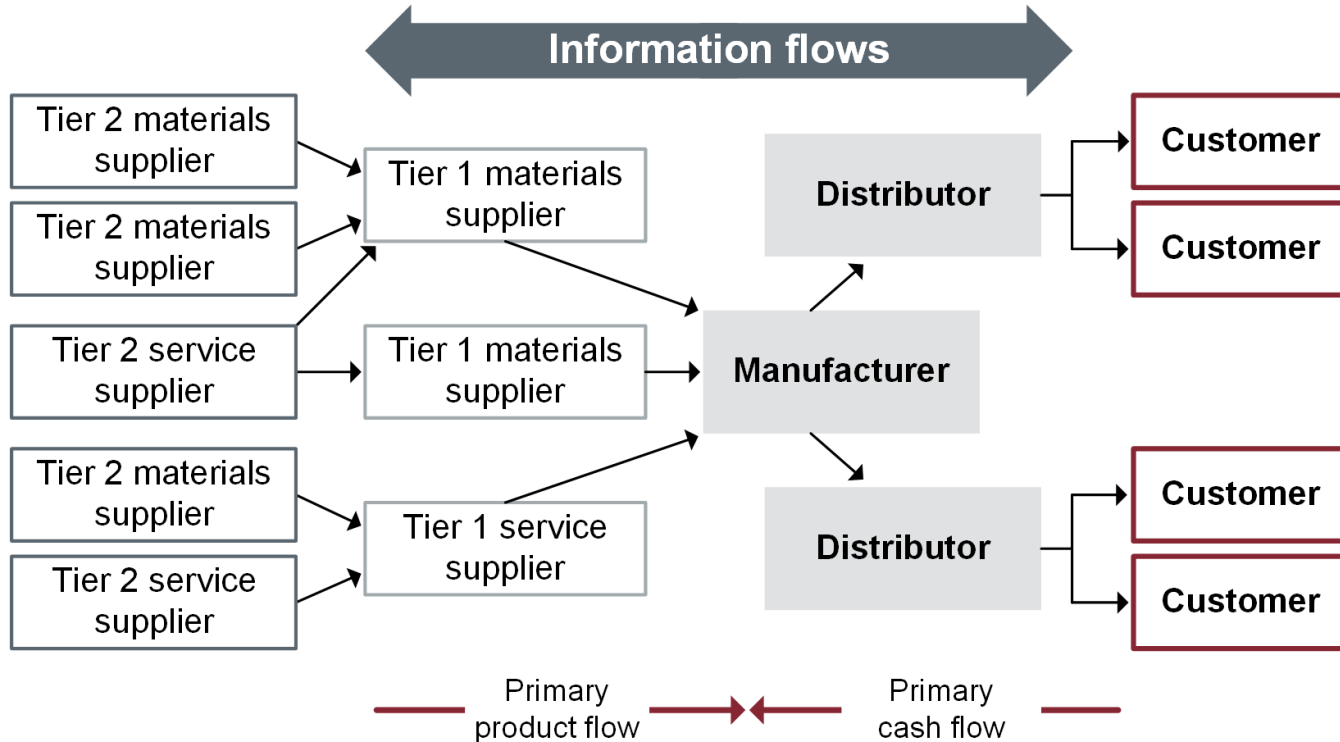

Services Also Have Supply Chains
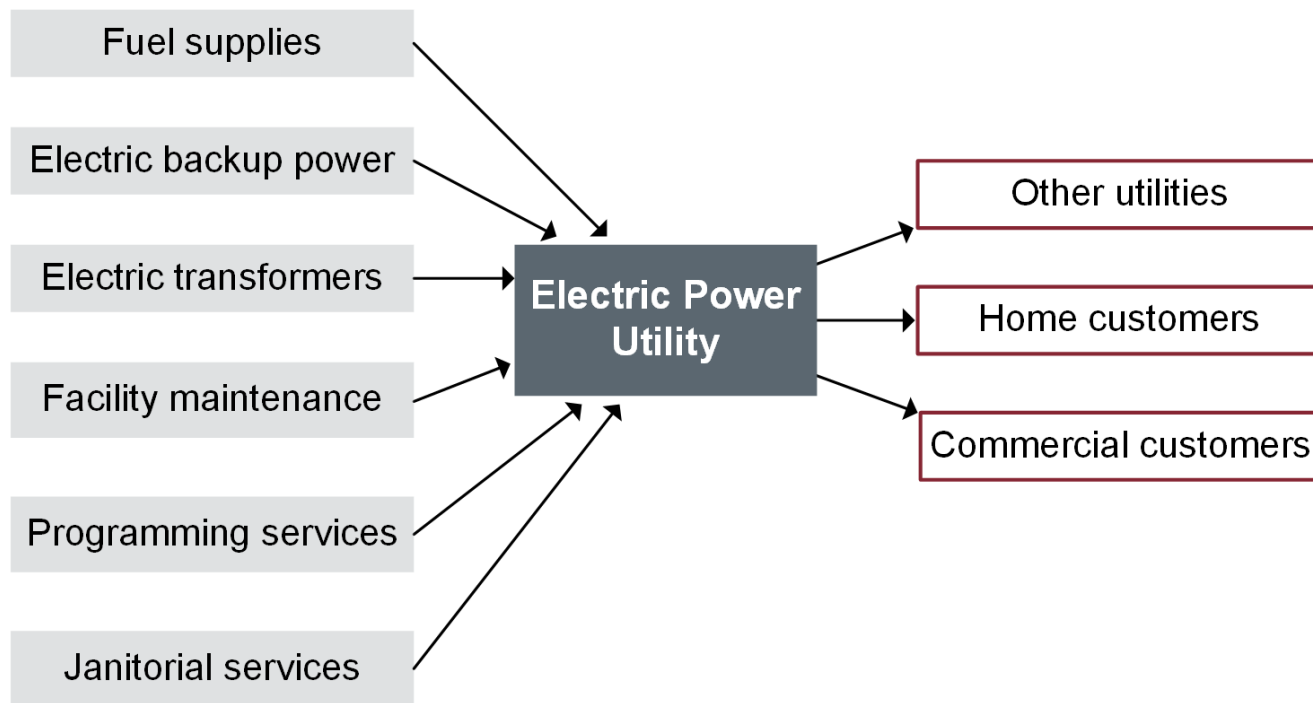

Specialized Supply Chains

- Humanitarian and disaster relief: Trusted relationships help overcome infrastructure failures.
- Hospital: Cost cutting (given quality), actual versus contract prices, tracking and billing accuracy, centralizing supply.
- Retailers: Amazon severely pressuring multichannel distribution model. Stores as DCs.

SECTION B:
DEMAND ANALYSIS AND PATTERNS

Section B Introduction

Section B Key Processes:	**Section B Topics:**

Section B Key Processes:

- Collect and analyze historical and environmental demand data.
  - Perform historical analysis.
    - Competitive environment
  - Perform environmental scan and market analysis.
  - Perform product assessment.
    - Demand patterns

Section B Topics:

- Topic 1: Demand Analysis
- Topic 2: Demand Patterns

SWOT Analysis

Strengths	**Weaknesses**	Internal focus
Opportunities	**Threats**	External focus
Positive	Negative	
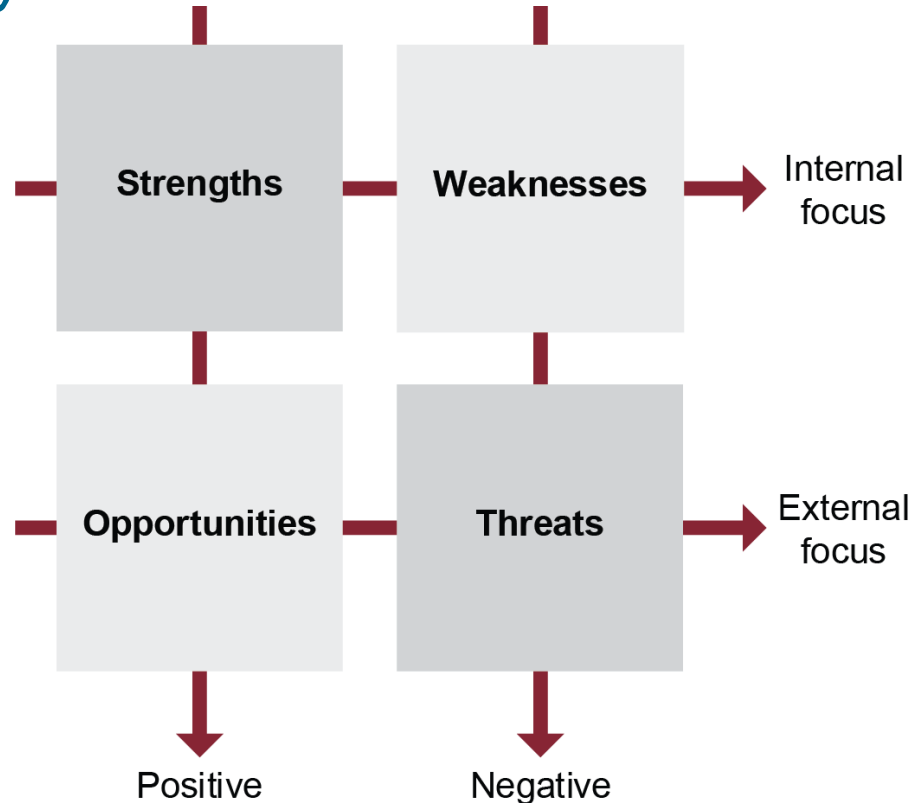

Marketing Strategy and Plan

Business Plan

Finance | Engineering | Marketing | Operations
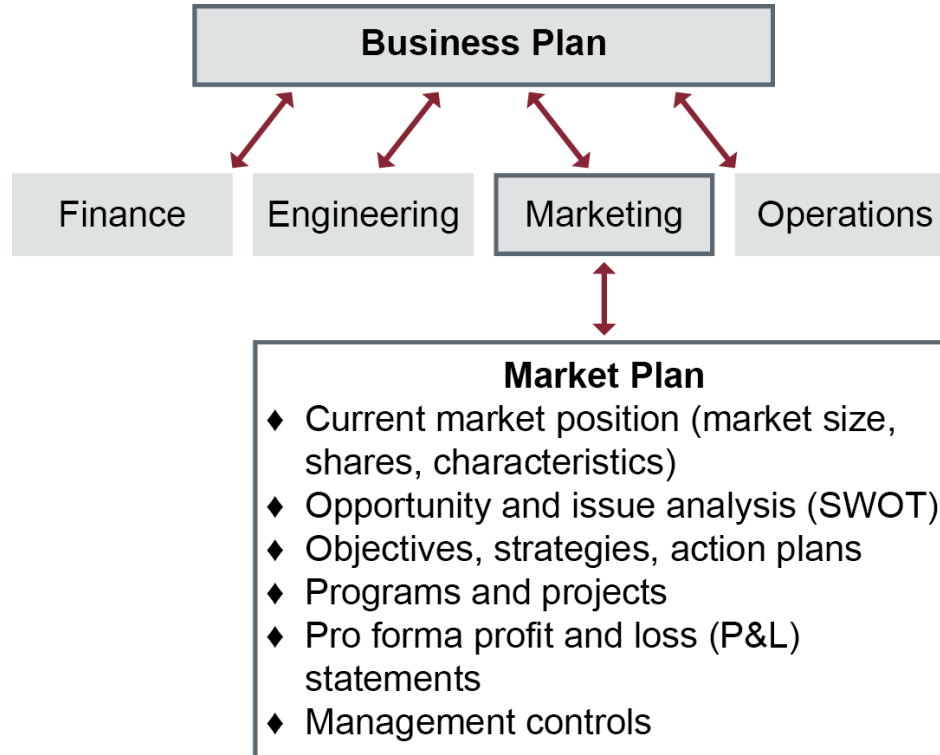

Market Plan
- ♦ Current market position (market size, shares, characteristics)
- ♦ Opportunity and issue analysis (SWOT)
- ♦ Objectives, strategies, action plans
- ♦ Programs and projects
- ♦ Pro forma profit and loss (P&L) statements
- ♦ Management controls

Market Research: Market Analysis

- *Global, local, and industry economy*
- *Government and third-party sources*
- *Value deals during recessions*
Purposes of Market Research

- Finding potential markets
  - Does anyone care?
- Analyzing markets
  - Who, where, when, why, what, how many?
- Refining product design
  - Strategic price.
  - Include features with positive contribution margin.

Competition

- Scan
- Regional unsatisfied demand
- Footholds in saturated markets
- Benchmark

Global Perspectives

- Connected
- Complex
- Volatile

ΛPICS

Macroeconomic Demand Patterns
Microeconomics

- Price goes up, demand goes down and vice versa.
- Substitution effect: interrelated prices.
- Price adjusts until supply and demand equilibrium.
- Given small price change.
  - Elastic: large change in demand.
  - Inelastic: small change in demand.
  - Maximize profit margin with price changes.
- Marginal analysis: marginal utility > marginal cost.
  - Ignore costs incurred regardless of choice.

Short- to Medium-Term Demand Patterns

CSCP
CERTIFIED SUPPLY CHAIN PROFESSIONAL
SECTION C:
DEMAND MANAGEMENT

APICS

ascm

Section C Introduction

Section C Key Processes:	**Section C Topics:**

Section C Key Processes:

- Influence demand through marketing activities.
  - Apply the four Ps.
  - Analyze product life cycles.

Section C Topics:

- Topic 1: Demand Management
- Topic 2: Influencing Demand

Demand Management

Demand management is the function of recognizing all demands for goods and services to support the marketplace:

- Prioritizing demand
- Planning, executing, controlling, and monitoring the design, pricing, promotion, and distribution of products and services

Demand Management Road Map

- Liaison
  - Influence to make products market needs.
  - Convince customers to purchase in profitable ways.
- Product-service package order winner capability:
  - Order qualifiers
  - Order winners

Linkages Among Elements of Demand Management

Planning demand → Communicating demand

Managing and prioritizing demand

Influencing demand

Planning Demand and Demand Plan

- Demand plan is plan for action based on
  - Forecasts
  - Planned demand generation activities.
- Planning horizon
  - Best practice: 18-month+
  - Revise on regular basis

Communicating Demand

Communicate soon to minimize surprises.

Structure communications to ensure that they occur.

Focus communications to fit audience.

Good Communications

Communications Structure for Communicating Demand
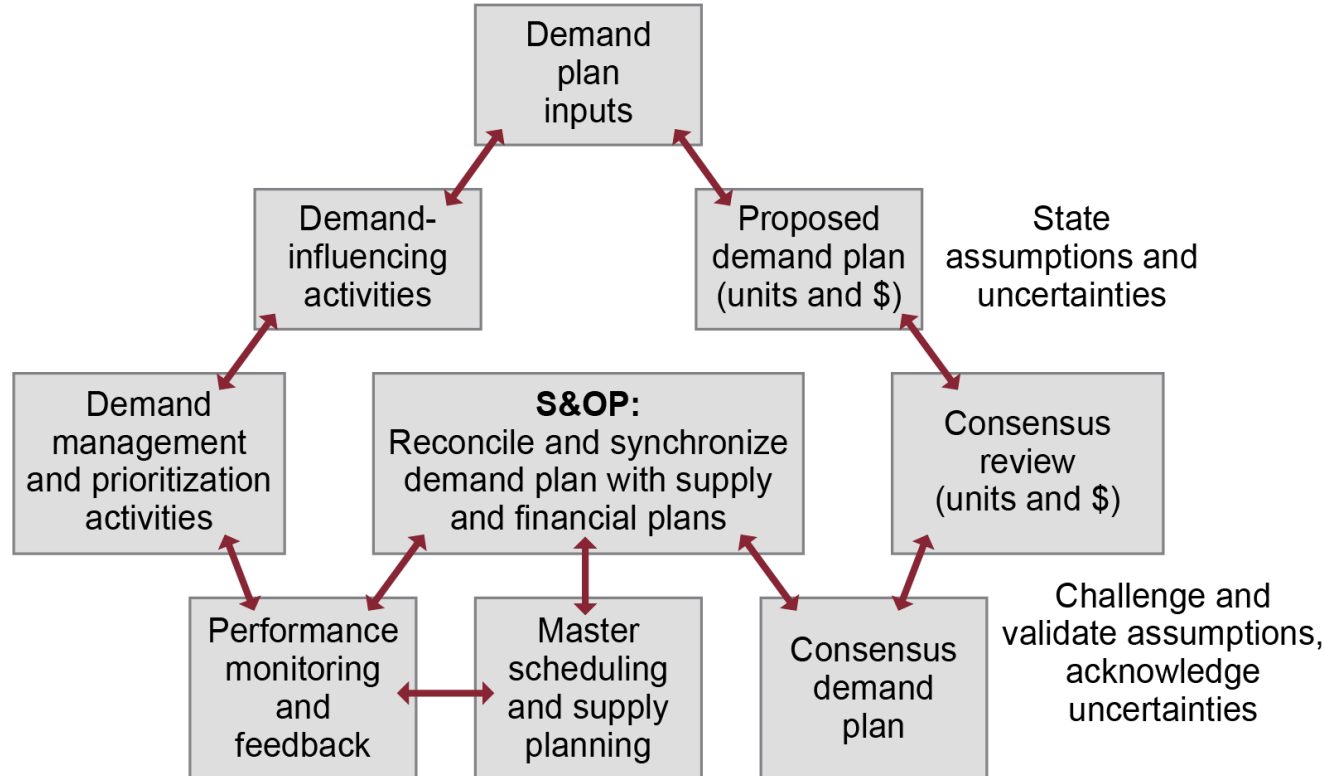

Demand Manager as Focal Point

Communicate to sales organization: what sales is expected to sell; what is available to be sold (consensus supply and demand).

Performance feedback: how well it is executing sales plans.

Salespersons

Marketing staff

Master scheduler and supply planners

Demand manager

Feedback and performance monitoring goals:

Communicate consensus demand plan and outcome of S&OP processes of reconciling and synchronizing supply and demand.

Communicate to product/brand and marketing organizations: changes in tactics needed to meet demand or business objectives.

Product and brand managers

Key customers

Get/give feedback on effectiveness of demand management efforts.

Alert product/brand, sales, marketing, and supply organizations of the need for action.

Influencing Demand Using Plan, Do, Check, Action

- Brand, marketing, and sales activities to convince customers to purchase products and services to meet or exceed business objectives
- Influencing product development and supply sides of organization
Demand Generation

- From latent to actual demand
- Educating customers
  - Product/brand awareness takes a long time.
  - Use feedback to modify approach/budget.
- Educating SC partners
  - Persons who design, build transport, or sell product.

4 Ps: Product (Service)

- Was: products identical to all customers; item generated need.
- Is: dynamic; customer need is basis.
- Designed to be customizable for segments.
- Customer care is an implied or explicit product.
- Customized design, manufacture, promotion, distribution, sales methods, and customer care training.
4 Ps: Price

- Strategic decision based on competition, perceived value, and brand identity.
- Commodity price based on competition.
- Differentiated market can base price on R&D, marketing costs, or value to customer.
- Customer-focused differentiates products/price by segment.
- Finds optimal balance of profit vs. attractive price to customers.

Product

Placement

Price

Promotion
4 Ps: Placement

- How to get it to customer.
- Traditionally one-way communication; now back-forth flow.
- Contact channel strategy:
  - Means to increase profitability, control, and consistency
  - Interactive contact channels (call centers, live dialogue websites, chat rooms).
  - Is itself a product; different segments get different options.
4 Ps: Promotion: Customer-Focused Promotion Activities
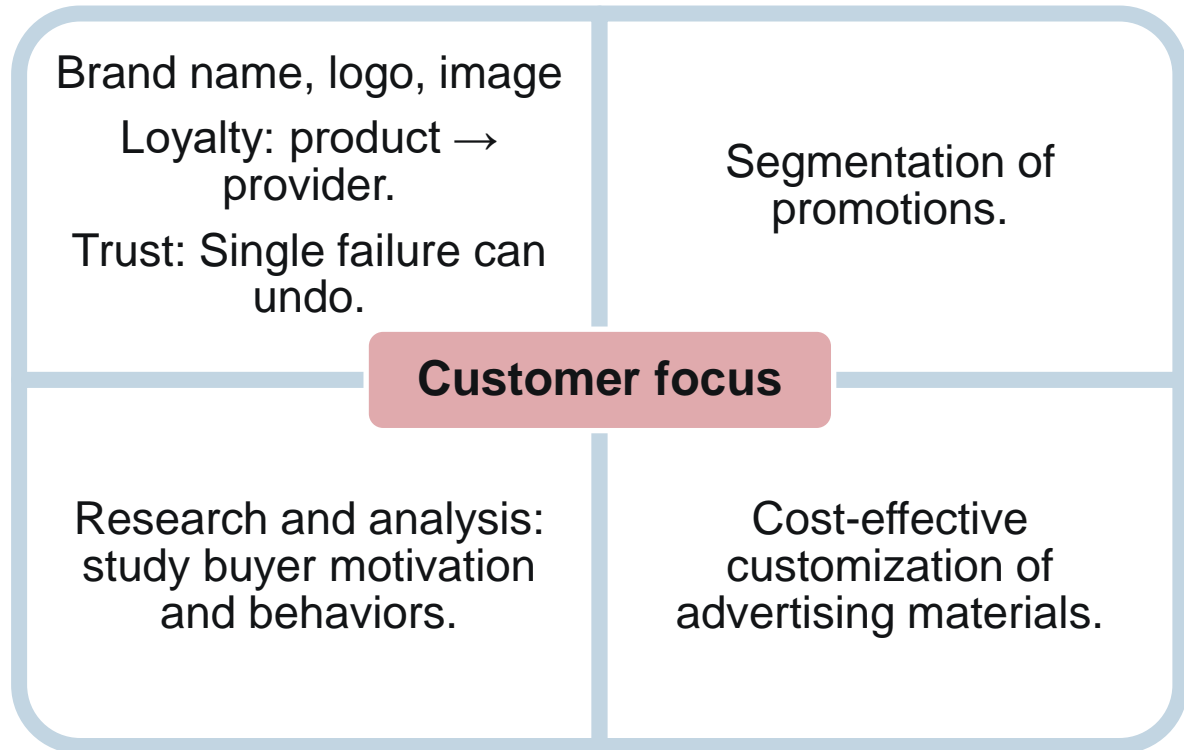

Brand name, logo, image

Loyalty: product → provider.

Trust: Single failure can undo.

Segmentation of promotions.

Customer focus

Research and analysis: study buyer motivation and behaviors.

Cost-effective customization of advertising materials.

Product

Placement

Price

Promotion
Product Life Cycle Stages

Product Life Cycle Management
NPI Frequency versus Demand Uncertainty

▪ Clockspeed: industry, market, or product rate of technology change

High ↑

	Unstable demand, low clockspeed	Unstable demand, high clockspeed
Demand uncertainty	Integral design Push-pull manufacturing **Examples:** • Industrial goods with few buyers but high margins • Fertilizers and pesticides • High grade furniture	Modular design Pull manufacturing Responsiveness: e.g., short lead times, excess capacity, and market pricing **Examples:** • Fast fashion • Cell phones
	Stable demand, low clockspeed	**Stable demand, high clockspeed**
	Integral design Push manufacturing Efficient supply chain High inventory turnover **Examples:** • Consumer staples • Industrial commodities	Modular design Push manufacturing Efficient supply chain **Example:** • Technology components used by many different manufacturers (e.g., cell phone cameras)

Low   **NPI frequency**   High

APICS

CSCP CERTIFIED SUPPLY CHAIN PROFESSIONAL

SECTION D: FORECASTING

Section D Introduction

| **Section D Key Processes:** | **Section D Topics:** |

Section D Key Processes:

- Build the forecast.
  - Select appropriate forecasting methods.
    - Qualitative, quantitative
    - Intrinsic, extrinsic
  - Measure forecast accuracy.
    - Forecast error, forecast bias

Section D Topics:

- Topic 1: Forecasting Principles and Process
- Topic 2: Forecasting Methods
- Topic 3: Measures of Forecast Error

Principles of Forecasting

Forecasts are:
- Necessary (sometimes)
- Best based on actual demand rather than just orders
- Wrong (almost always, and they should include an estimate of error)
- More accurate for groups than for single items
- More accurate for near term than for long term.

Monthly Demand

Forecast ▮

Actual ▮

Forecasting Process

1. Specify purpose,
2. Aggregation, units, and
3. Time horizon.
4. Visualize data.
5. Choose forecasting method or model.

Raw Data
6. Prepare data.
7. Test (historical data).
8. Forecast.
9. Perform S&OP.
10. Review and improve.

Qualitative and Combination Methods

- Estimates
  - $$\frac{\text{Optimistic} + (4 \times \text{Most Likely}) + \text{Pessimistic}}{6}$$

- Judgmental/expert judgment
- Delphi method
  - Anonymous to avoid:
    - "Groupthink"
    - "Stake in the ground"

- Combine with quantitative to add expertise, assumptions
- When to use qualitative forecasting methods:
  - For new products
  - When hard data are lacking

APICS

Deseasonalizing

- Calculate month average for each month: e.g., (Jan-Y1 + Jan-Y2 + Jan-Y3)/3
- Calculate year average: Sum month averages and divide by 12.
- Calculate seasonal index:
  – Divide each month average by the year average.

  – Seasonal Index = $\dfrac{\text{Average Demand for Period (e.g., Month)}}{\text{Average Demand for all Periods (e.g., Year)}}$

APICS

Deseasonalizing

	A	B	C	D	E	I	J	K	L
1		Raw Data					Deseasonalized Data		
2	Month	Year 1	Year 2	Year 3	Month Average	Seasonal Index	Year 1	Year 2	Year 3
3	Jan	34	27	32	31.00	2.214	15.35	12.19	14.45
4	Feb	33	31	26	30.00	2.143	15.40	14.47	12.13
5	Mar	10	11	12	11.00	0.786	12.73	14.00	15.27
6	Apr	3	4	5	4.00	0.286	10.50	14.00	17.50
7	May	0	2	4	2.00	0.143	0.00	14.00	28.00
8	Jun	2	1	3	2.00	0.143	14.00	7.00	21.00
9	Jul	0	1	2	1.00	0.071	0.00	14.00	28.00
10	Aug	4	3	5	4.00	0.286	14.00	10.50	17.50
11	Sep	9	11	10	10.00	0.714	12.60	15.40	14.00
12	Oct	14	13	15	14.00	1.000	14.00	13.00	15.00
13	Nov	27	29	25	27.00	1.929	14.00	15.04	12.96
14	Dec	34	30	32	32.00	2.286	14.88	13.13	14.00
15	SUM	170	163	171	168				
16	Year Average	14.17	13.58	14.25	14.00				

Naïve; Simple or Weighted Moving Average

- Naïve: Lasts month's actual is this month's forecast
- Simple moving average:

  - 3−Month Moving Average = $\dfrac{(M1 + M2 + M3)}{3}$ =

    $\dfrac{14.00 + 15.87 + 14.64}{3}$ = 14.84
  - Smooths out irregular demand, but lags trend
- Weighted moving average:

  - 3−Month Weighted Moving Average = $\dfrac{(1 \times M1) + (2 \times M2) + (3 \times M3)}{6}$ =

    $\dfrac{(15.51) + (2 \times 19.73) + (3 \times 18.61)}{6}$ = 18.47
  - Also smooths, but lags trend less

ꓥPICS

Exponential Smoothing

- Inputs: last period's forecast, last period's demand, and alpha
  - New Forecast =
    ($\alpha \times$ Last Period's Demand) + [$(1 - \alpha) \times$ Last Period's Forecast]
- Alpha, α, a smoothing constant between 0 and 1
  - Example: 0.3, 30% weight on demand, 70% on forecast,
    $(0.3 \times 14.92) + [(0.7) \times 17.71] = 16.87$
  - Typically between 0.05 and 0.5
  - Experience, trial and error, and historical testing
- Can minimize lag even more, but not eliminate

Comparison of Time-Series Forecasts

Forecasting month-to-month works well.

$$0.786 \times 14.84 = 11.66 \qquad 0.071 \times 18.47 = 1.32$$

Service-Sector Forecasting

- Service sector may track "seasonal" demand in units as short as minutes.
- Restaurant variables
  - Workers per shift
  - Registers in operation
  - Number of available tables
  - Space requirements
  - Amount and types of foods
Leading and Lagging Economic Indicators

Lagging Indicators	Leading Indicators
• Unemployment rate	• Building permits
• Outstanding loans	• Initial unemployment claims
• Inventory to sales	• Orders for plant equipment, durable goods and materials
• Changes in company profits	• Changes in money supply
• Spending by businesses	• S&P 500
• Consumer price index (CPI)	• Long- vs. short-term rates
• Average duration of unemployment	• Consumer optimism

Past and current trends   **Future trends**

Associative Forecasting

- *y = α + βx*
- *Roofing Sales = α + (β ×Prior Month's Housing Starts)*
Forecast Error

$$\textit{Forecast Error} = |A - F|$$
$$= |29\ \textit{units} - 33.51\ \textit{units}| = |-4.51\ \textit{units}| = 4.51\ \textit{units}$$

- *Where:*
  - A = Actual demand
  - F = Forecast demand
  - Absolute = | |
- NOTE: An absolute value has no +/− sign, and so, in this case, it measures the size of the error, not the direction.

Forecast Error and Accuracy

- Forecast Error as a Percentage =

$$\frac{|A-F|}{A} = \frac{|29 \text{ units} - 33.51 \text{ units}|}{29 \text{ units}} = \frac{4.51 \text{ units}}{29 \text{ units}} = 0.155 = 15.5\% \text{ error}$$

- Forecast Accuracy = 1 − Forecast Error as a Percentage = 1 − 0.155 = 0.845 = 84.5% accuracy

- ***Where:***

  - A = Actual demand

  - F = Forecast demand

APICS

Bias and Random Variation

Bias

- Consistent deviation from the mean in one direction
- Good forecast: not biased
- Cumulative Forecast Error = Cumulative Actual Demand − Cumulative Forecast Demand
- Not absolute (direction matters)

Random Variation

- If cumulative actual demand = cumulative forecast demand, then no bias.
- Wide swings in both directions can still cause issues.

APICS

Mean Absolute Deviation (MAD) with Smoothing

SECTION E:
SUPPLY AND DEMAND ALIGNMENT

Section E Introduction
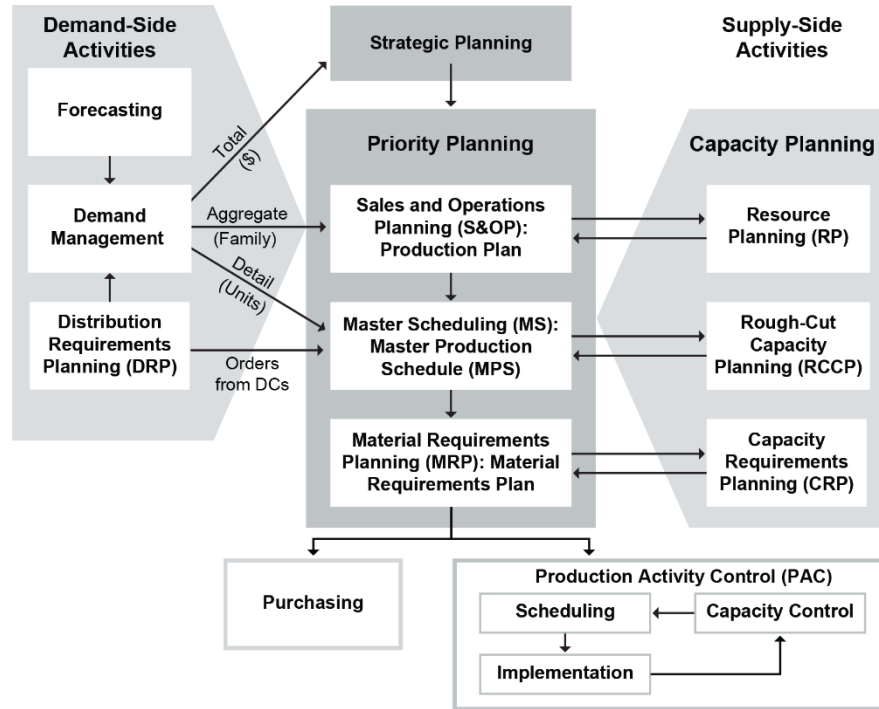

Section E Key Processes:

- Align supply with demand.
  - Execute sales and operations planning (S&OP) process.
  - Manage inputs and outputs.
  - Perform reconciliation and analysis.

Section E Topics:

- Topic 1: Supply and Demand Alignment
- Topic 2: Sales and Operations Planning

Operations Planning and Control

Strategic and Business Planning

- Strategic plan
  - Mission and the resources needed to get there
  - Goals: Market share, revenue, profits, and growth
  - Objectives: Value to customers, owners
- Business plan
  - Inputs: demand plan and long-term forecasts
  - Explicit vision to achieve strategy over 1-3 years
  - In dollars and grouped by product family
  - Point of reference for S&OP
  - Guidance for tactical production and sales plans

APICS

Master Planning and Resource Planning

Master Planning	Resource Planning
• Long-term resource plan	• 15- to 18-month capacity planning
• Near-medium-term sales and operations plan	• Capacity at business and production plan level
• Available capacity (S&OP) plus investments in capacity (resource planning)	• Resources that take long to acquire
• Satisfy stakeholders including ROI	• Lead time to get equipment, install it, and get it producing

Monthly Sales and Operations Planning Process

Step 1	Data gathering	Statistical forecast updated.
Step 2	Demand planning phase	Statistical forecast reviewed by product/brand, marketing, sales.
Step 3	Supply planning phase	Supply management team may alter operations plan if necessary.
Step 4	Pre-meeting	Key players review data, set executive meeting agenda.
Step 5	Executive meeting	VPs meet monthly to review decisions and strategy.

Evaluating Supply Capability

Supply planning

Pre-meeting

Demand planning

Evaluating Demand Levels

Financial review

Executive meeting

Reconciling Demand, Supply, and Financial Plans
Demand Planning Phase Meeting

- Highest-ranking demand-side professional chairs.
- Dashboards
  - Consolidate product, brand, marketing, sales plans.
  - Demand plan: units and $.
  - Metrics, assumptions, events, opportunities, risks, and decisions.

- Meeting brevity:
  - Product family, rest by exception.
  - What changed since last meeting (replanning).
  - Validating assumptions.
- Strategies to close demand and business plan gaps.
- Success: communications.

Demand Plan Dashboard in Units

Historical demand : **Demand plan for 18 months in future**

Key:

- Actual demand
- Annual business plan
- Prior demand plan
- Current demand plan

Product family XYZ:
Lead time = 2 weeks
Inventory turnover = 2 weeks

Metrics (excerpt)		Historical Month		
Goal	Metric	−3	−2	−1
Delivery promises	On time in full	88%	86%	80%
Improve cash flow	Cash-to-cash	16d	13d	14d
Plan accuracy	Plan vs. actual	75%	80%	68%

Key assumptions
- **Internal:** Period 6 TV ad buy, results seen in Periods 6–8
- **External:** Competitor X will mimic Product XYZ feature ABC by Period 14 at lower price

Key events
- **Internal:** Period 1 deliveries delayed due to Machine 123 breakdown, will continue to delay in Period 1.
- **External:** Economic growth will continue to be flat for next 12 periods.

Risks/Opportunities
- **Risk:** Customer Z is vulnerable.
- **Opportunity:** Breakthrough in product development can reduce product replacement time by 3 months.

Decisions
- Rapid development of Product Family XYZ replacement for release in Period 14.

Evaluating Supply Capability

Supply/Demand Match

- Production plan will match demand plan.

Supply/Demand Mismatch

- Supply develops alternative plans:
  - Produce above demand for certain periods to meet later spikes in demand.
  - Increase capacity by hiring, adding shift, planning overtime, leasing equipment, or outsourcing (or opposite).
  - Reducing demand plan (as last resort).

S&OP Inputs and Outputs

- Operations
  - Represent demand-side interests in operations terms
- Sales
  - Daily
  - Sufficient inventory
  - Time to market

Operations

Product development and brand management

Demand management: helps parties understand each other

Sales

Marketing

- Product development and brand management
  - Long-term
  - Seek value added
- Marketing
  - Medium to short term
 - Tailoring demand to capacity

APICS

Reconciliation: Executive Meeting

- Participants: CEO and demand, supply, and financial executives and other direct reports to CEO.
- Goal: consensus demand plan.
  – Review metrics, changes, new risks and opportunities, and other events.
- Executives will want to know:
  – Are plans on budget, schedule, and scope?
  – How are product mixes performing?
  – Do strategies need modifying and when do decisions need to be made?
- Communication of agreed-upon plan to all internal participants is critical.
  – Depends on quality of internal communications process.

Implementing S&OP: Coordinating Function

- *S&OP institutionalizes functional area communications.*
- *Assembles all facts for debate and reconciles functional plans.*
- *Links business planning and tactics (short to medium term) to enable proactive responses.*
- *Builds bridge from customer value to SC efficiency.*
- *Replanning motivates continuous improvement.*

Business Planning

Tactics

Demand-Side Activities
- Forecasting
- Demand Management
- Distribution Requirements Planning (DRP)

Total ($)
Aggregate (Family)
Detail (Units)
Orders from DCs

Strategic and Business Planning

Priority Planning
- Sales and Operations Planning (S&OP): Production Plan
- Master Scheduling (MS): Master Production Schedule (MPS)

Supply-Side Activities

Capacity Planning
- Resource Planning (RP)
- Rough-Cut Capacity Planning (RCCP)

Contributions to S&OP: Cooperation Among…

Demand Side	Finance	Supply Side

Demand Side
- Demand forecasts
- Demand plan commitments
- Demand plan numbers and assumptions
- Market analysis

Finance
- Financial feasibility
- Fit with business plan

Supply Side
- Output and resources
- Product families
- Operations constraints
- Operations strategies
- Supply-demand strategies
- Actual results and other performance metric data

Hybrid

Supply-Demand Strategies

Allocation:

- Assign items to specific orders but still in inventory
- Process to distribute materials in short supply

| Supply-Demand Option	MPS Focus
Make-to-stock (MTS) • Few items made from many components • Integral design	Schedule finished goods.
Make-to-order (MTO) • Many items made from few components • Custom	Schedule raw materials.
Assemble-to-order (ATO) • Many end items, few components • Assemble near point-of-sale	Schedule module production.

APICS

Demand Management and Prioritization: MPS and MRP

Situations for Managing and Prioritizing Demand

- **Find ways to better use current capacity.**

Supply organization cannot meet demand plan without changes.

Demand plan overstates actual demand; changes will impact sales and costs.

- **Use time fences to delay production as long as feasible.**

Large one-time sales opportunity would impact other orders, costs, profit.

Demand plan understates actual demand; changes will impact sales and costs.

- **Establish unusual demand evaluation process.**

- **Extend planning horizon.**
- **Incentivize substitutes.**

Measures of Customer Service Levels

- Is cost of achieving a given service level a sound investment?
- Fill rates:
  - Unit fill rate
  - Line-item fill rate
  - Monetary value fill rate
- Stockout frequency

- Lead time monitoring
  - Speed of performance
  - Consistency
  - Flexibility
  - Malfunction recovery
- Order status reporting
- Customer satisfaction
  - Establish, then fulfill expectations
