A need for a particular product or component. The demand could come from any number of sources (e.g., a customer order or forecast, an interplant requirement, a branch warehouse request for a service part, or the manufacturing of another product). At the finished goods The use of a name, term, symbol, or design, or a level, demand data is usually different from sales data combination of these, to identify a product. because demand does not necessarily result in sales (i.e., if there is no stock, there will be no sale). There are generally up to four components of demand: cyclical component, random component, seasonal component, and trend component. See: booked orders. 1) The function of recognizing all demands for goods and services to support the marketplace. It involves prioritizing demand when supply is lacking. [This] A process that weighs both customer demand and a facilitates the planning and use of resources for firm's output capabilities, and tries to balance the two. profitable business results. 2) In marketing, the Demand management is made up of planning process of planning, executing, controlling, and demand, communicating demand, influencing monitoring the design, pricing, promotion, and demand, and prioritizing demand. distribution of products and services to bring about transactions that meet organizational and individual needs. Syn.: marketing management. See: demand planning. The use of tactics such as price incentives, advertising, A set of marketing tools to direct the business offering product positioning, product modifications and to the customer; include product, price, place, and substitutions or trade programs to entice customers to promotion. purchase. A quantitative forecasting technique based on applying The activity required to administratively process a past patterns of demand data covering introduction, customer's order and make it ready for shipment or growth, maturity, saturation, and decline of similar production. products to a new product family.
